

Mark Scheme (Results)

Summer 2023

Pearson Edexcel International Advanced
Subsidiary Level In Chemistry (WCH15)

Paper 01

Unit 5: Transition Metals and Organic Nitrogen
Chemistry

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Summer 2023

Question Paper Log Number: P71943A

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.

/ means that the responses are alternatives and either answer should receive full credit.

() means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.

Phrases/words in **bold** indicate that the meaning of the phrase or the actual word is **essential** to the answer.

ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.

Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

Section A

Question Number	Answer	Mark
1	<p>The only correct answer is D $(\text{Pt(s)} \text{V}^{2+}(\text{aq}), \text{V}^{3+}(\text{aq}) \text{Cu}^{2+}(\text{aq}) \text{Cu(s)})$</p> <p><i>A is not correct because the $\text{V}^{3+}(\text{aq})/\text{V}^{2+}(\text{aq})$ half-cell should have a platinum electrode and should show oxidation and the $\text{Cu}^{2+}(\text{aq})/\text{Cu(s)}$ half-cell should show reduction</i></p> <p><i>B is not correct because the $\text{V}^{3+}(\text{aq})/\text{V}^{2+}(\text{aq})$ half-cell should have a platinum electrode</i></p> <p><i>C is not correct because the $\text{V}^{3+}(\text{aq})/\text{V}^{2+}(\text{aq})$ half-cell should show oxidation and the $\text{Cu}^{2+}(\text{aq})/\text{Cu(s)}$ half-cell should show reduction</i></p>	(1) Computer

Question Number	Answer	Mark
2	<p>The only correct answer is D $(\text{Mg} + 2\text{Ce}^{4+} \rightarrow \text{Mg}^{2+} + 2\text{Ce}^{3+})$</p> <p><i>A is not correct because Ce is a weaker reducing agent than Mg</i></p> <p><i>B is not correct because Ce^{3+} is a weaker reducing agent than Ce</i></p> <p><i>C is not correct because Mn^{2+} is a weaker reducing agent than Mn</i></p>	(1) Computer

Question Number	Answer	Mark
3	<p>The only correct answer is D $(\Delta S^{\circ}_{\text{total}})$</p> <p><i>A is not correct because E°_{cell} is directly proportional to $\ln K_c$</i></p> <p><i>B is not correct because E°_{cell} is directly proportional to $\Delta S^{\circ}_{\text{total}}$ and not ΔH°</i></p> <p><i>C is not correct because E°_{cell} is directly proportional to $\Delta S^{\circ}_{\text{total}}$ and not $\Delta S^{\circ}_{\text{system}}$</i></p>	(1) Computer

Question Number	Answer	Mark
4	<p>The only correct answer is C (the reactants are thermodynamically unstable with respect to the products)</p> <p><i>A is not correct because the reaction is thermodynamically feasible so will occur under certain conditions</i></p> <p><i>B is not correct because the $E^{\ominus}_{\text{cell}}$ value is a thermodynamic and not a kinetic property</i></p> <p><i>D is not correct because the reaction may be kinetically inert and the conditions may be non-standard</i></p>	(1) Computer

Question Number	Answer	Mark
5	<p>The only correct answer is A ($\text{H}_2 + 2\text{OH}^- \rightarrow 2\text{H}_2\text{O} + 2\text{e}^-$)</p> <p><i>B is not correct because hydrogen is consumed and not produced in a hydrogen-oxygen fuel cell</i></p> <p><i>C is not correct because oxygen is reduced at the positive electrode in a hydrogen-oxygen fuel cell</i></p> <p><i>D is not correct because oxygen is consumed and not produced in a hydrogen-oxygen fuel cell</i></p>	(1) Computer

Question Number	Answer	Mark
6	<p>The only correct answer is D ($\text{Cu} [\text{Ar}]3\text{d}^{10}4\text{s}^1$)</p> <p><i>A is not correct because the 4s electrons are removed before the 3d electrons</i></p> <p><i>B is not correct because the electronic configuration of chromium is $[\text{Ar}]3\text{d}^54\text{s}^1$</i></p> <p><i>C is not correct because the 4s electrons are removed before the 3d electrons</i></p>	(1) Computer

Question Number	Answer	Mark
7	<p>The only correct answer is C (six)</p> <p><i>A is not correct because it only takes into account water ligands</i></p> <p><i>B is not correct because it only takes into account ethanoate ions</i></p> <p><i>D is not correct because the coordination numbers of the two chromiums have been added together</i></p>	(1) Computer

Question Number	Answer	Mark
8	<p>The only correct answer is A ($[\text{Fe}(\text{CN})_6]^{4-}$)</p> <p><i>B is not correct because $\text{C}_2\text{O}_4^{2-}$ is a bidentate ligand</i></p> <p><i>C is not correct because EDTA^{4-} is a hexadentate ligand</i></p> <p><i>D is not correct because $\text{NH}_2\text{CH}_2\text{CH}_2\text{NH}_2$ is a bidentate ligand</i></p>	(1) Computer

Question Number	Answer	Mark
9	<p>The only correct answer is A ($[\text{CuCl}_4]^{2-}$)</p> <p><i>B is not correct because this complex is octahedral with a bond angle of 90°</i></p> <p><i>C is not correct because this complex is linear with a bond angle of 180°</i></p> <p><i>D is not correct because this complex is square planar with a bond angle of 90°</i></p>	(1) Computer

Question Number	Answer	Mark
10	<p>The only correct answer is B ($[\text{Co}(\text{H}_2\text{O})_6]^{2+}$)</p> <p><i>A is not correct because VO^{2+} is blue</i></p> <p><i>C is not correct because $[\text{Cr}(\text{H}_2\text{O})_6]^{2+}$ is blue</i></p> <p><i>D is not correct because $[\text{Cu}(\text{H}_2\text{O})_6]^{2+}$ is blue</i></p>	(1) Computer

Question Number	Answer	Mark
11	<p>The only correct answer is D ($2\text{Cr}(\text{OH})_3 + 3\text{H}_2\text{O}_2 + 4\text{KOH} \rightarrow 2\text{K}_2\text{CrO}_4 + 8\text{H}_2\text{O}$)</p> <p><i>A is not correct because FeCl_2 forms a green solution</i></p> <p><i>B is not correct because this is not a redox reaction</i></p> <p><i>C is not correct because this is not a redox reaction</i></p>	(1) Computer

Question Number	Answer	Mark
12	<p>The only correct answer is C ($[\text{Cu}(\text{H}_2\text{O})_6]^{2+} + 4\text{NH}_3 \rightarrow [\text{Cu}(\text{NH}_3)_4(\text{H}_2\text{O})_2]^{2+} + 4\text{H}_2\text{O}$)</p> <p><i>A is not correct because this is the ionic equation describing the deprotonation when ammonia is not in excess</i></p> <p><i>B is not correct because four water ligands are exchanged by ammine ligands when ammonia is in excess</i></p> <p><i>D is not correct because four water ligands are exchanged by ammine ligands when ammonia is in excess</i></p>	(1) Computer

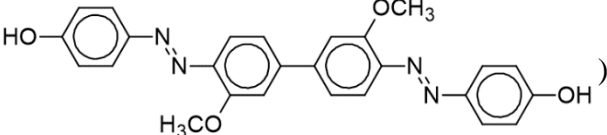

Question Number	Answer	Mark
13	<p>The only correct answer is A ($[\text{Zn}(\text{OH})_4]^{2-} + 2\text{H}_3\text{O}^+ \rightarrow [\text{Zn}(\text{H}_2\text{O})_4(\text{OH})_2]$)</p> <p><i>B is not correct because $[\text{Zn}(\text{OH})_4]^{2-}$ is a soluble complex ion</i></p> <p><i>C is not correct because $[\text{Cr}(\text{H}_2\text{O})_6]^{3+}$ is a soluble complex ion</i></p> <p><i>D is not correct because $[\text{Cr}(\text{OH})_6]^{3-}$ is a soluble complex ion</i></p>	(1) Computer

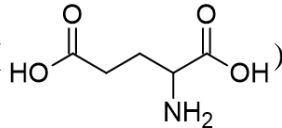

Question Number	Answer	Mark
14	<p>The only correct answer is C (+5 → +4 → +5)</p> <p><i>A is not correct because the oxidation state in V_2O_5 is +5 not +2</i></p> <p><i>B is not correct because the oxidation state in V_2O_5 is +5 not +2</i></p> <p><i>D is not correct because the vanadium cannot be oxidised from +5 to +6</i></p>	(1) Computer

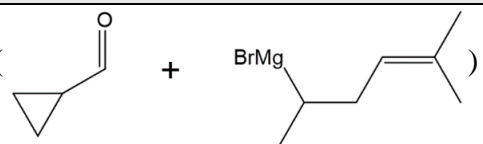

Question Number	Answer	Mark
15	<p>The only correct answer is C (14)</p> <p><i>A is not correct because each carbon contributes one electron from a p-orbital</i></p> <p><i>B is not correct because each carbon contributes one electron from a p-orbital</i></p> <p><i>D is not correct because each carbon contributes one electron from a p-orbital</i></p>	(1) Computer

Question Number	Answer	Mark
16	<p>The only correct answer is C (a lone pair of electrons on oxygen in phenol is delocalised into the ring)</p> <p><i>A is not correct because the polarity of the O-H bond does not increase the electron density of the benzene ring</i></p> <p><i>B is not correct because the electronegativity of the oxygen atom does not increase the electron density of the benzene ring</i></p> <p><i>D is not correct because there is a greater electron density in the ring in phenol than in benzene</i></p>	(1) Computer

Question Number	Answer	Mark
17	<p>The only correct answer is B ($\text{C}_2\text{H}_5\text{NH}_2 \xrightarrow{\text{C}_2\text{H}_5\text{Br}}$)</p> <p><i>A is not correct because the reduction of a nitrile forms a primary amine</i></p> <p><i>C is not correct because the products would be a tertiary amine and a quaternary ammonium salt</i></p> <p><i>D is not correct because the alkaline hydrolysis of this amide forms a primary amine</i></p>	(1) Computer

Question Number	Answer	Mark
18	<p>The only correct answer is D ()</p> <p><i>A is not correct because this is not an azo dye</i></p> <p><i>B is not correct because this is not an azo dye</i></p> <p><i>C is not correct because this azo dye could only form if the reagents were not in excess</i></p>	(1) Computer

Question Number	Answer	Mark
19	<p>The only correct answer is B ()</p> <p><i>A is not correct because this amino acid contains one acidic group and one basic group</i></p> <p><i>C is not correct because this amino acid contains one acidic group and two basic groups</i></p> <p><i>D is not correct because this amino acid contains one acidic group and two basic groups</i></p>	(1) Computer

Question Number	Answer	Mark
20	<p>The only correct answer is A ()</p> <p><i>B is not correct because these reagents would lead to the formation of compound B</i></p> <p><i>C is not correct because these reagents would lead to the formation of compound B</i></p> <p><i>D is not correct because these reagents would lead to the formation of compound B</i></p>	(1) Computer

Total for Section A = 20 marks

Section B

Question Number	Answer	Additional Guidance	Mark
21(a)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none">• (Hg^+ is $[\text{Xe}]4f^{14} 5d^{10}6s^1$ and $(\text{Hg}^{2+}$ is $[\text{Xe}]4f^{14} 5d^{10}(6s^0)$ (1)• (d-block element as last) electron goes into a (5)d-orbital(s) (when the electronic configuration is written according to the Aufbau principle) (1)• (not transition element as) Hg^+ and Hg^{2+}/(stable) ions do not have incompletely filled (5)d-orbital(s) (1)	<p>Accept use of d-subshell for d-orbital(s) Allow use of d-shell for d-subshell Penalise use of just d-block for d-shell once only Penalise use of 3d/4d for 5d once only</p> <p>Allow Hg loses (only) its 6s electrons (when forming ions/compounds)</p> <p>Do not award answer in terms of the electronic configuration of an ion of mercury</p> <p>Allow Hg^+ and Hg^{2+}/(stable) ions have completely full (5)d-orbital(s) Ignore any reference to d-d transitions / other transition element properties Do not award answer in terms of the electronic configuration of the element / an Hg atom</p>	(3) Expert

Question Number	Answer	Additional Guidance	Mark
21(b)(i)	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"><li data-bbox="353 496 1093 603">• Hg/mercury oxidised and from 0 (in Hg) to +2 (in Hg(NO₃)₂) (1)<li data-bbox="353 719 1093 826">• N/nitrogen is reduced and from +5 (in HNO₃) to +2 (in NO) (1)	<p>Allow oxidation numbers from annotation to the equation</p> <p>Ignore any reference to electron loss/gain</p> <p>Do not award reference to oxidation of any other element</p> <p>Do not award HNO₃ is reduced</p> <p>Do not award reference to reduction of any other element</p> <p>If no other mark awarded, Hg/mercury oxidised and N/nitrogen reduced OR Hg/mercury from 0 to +2 and N/nitrogen from +5 to +2 scores (1)</p>	<p>(2)</p> <p>Expert</p>

Question Number	Answer	Additional Guidance	Mark
21(b)(ii)	An answer that makes reference to the following points: <ul style="list-style-type: none">ionic half-equation for oxidation of mercury (1)ionic half-equation for reduction of nitrate (1)	Allow multiples and \rightleftharpoons for \rightarrow Ignore state symbols, even if incorrect Examples of ionic half-equations: $\text{Hg} \rightarrow \text{Hg}^{2+} + 2\text{e}^{(-)}$ Allow $\text{Hg} - 2\text{e}^{(-)} \rightarrow \text{Hg}^{2+}$ Do not award half-equation including $\text{HNO}_3/\text{NO}_3^-$ $4\text{H}^+ + \text{NO}_3^- + 3\text{e}^{(-)} \rightarrow \text{NO} + 2\text{H}_2\text{O}$ Allow $3\text{H}^+ + \text{HNO}_3 + 3\text{e}^{(-)} \rightarrow \text{NO} + 2\text{H}_2\text{O}$ Allow $4\text{HNO}_3 + 3\text{e}^{(-)} \rightarrow \text{NO} + 2\text{H}_2\text{O} + 3\text{NO}_3^-$	(2) Expert

Question Number	Answer	Additional Guidance	Mark
21(b)(iii)	An answer that makes reference to the following point: <ul style="list-style-type: none">balanced equation	Example of completed equation: $3\text{Hg}(\text{l}) + 8\text{HNO}_3(\text{aq}) \rightarrow 3\text{Hg}(\text{NO}_3)_2(\text{aq}) + 2\text{NO}(\text{g}) + 4\text{H}_2\text{O}(\text{l})$ Allow multiples	(1) Clerical

Question Number	Answer	Additional Guidance	Mark
21(c)(i)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> • correct species • balanced equation 	<p>Example of completed equation:</p> $\text{Hg}(\text{NO}_3)_2 + 3\text{C}_2\text{H}_5\text{OH} \rightarrow \text{Hg}(\text{CNO})_2 + 2\text{CH}_3\text{CHO} + 5\text{H}_2\text{O}$ <p>Ignore state symbols even if incorrect</p> <p>(1) Do not award molecular formulae eg $\text{C}_2\text{H}_4\text{O}$ for CH_3CHO Do not award CH_3COH for CH_3CHO</p> <p>(1) Allow multiples No TE on M1 except on correct molecular formulae and on CH_3COH</p>	<p>(2)</p> <p>Graduate</p>

Question Number	Answer	Additional Guidance	Mark
21(c)(ii)	<ul style="list-style-type: none"> • moles of $\text{Hg}(\text{CNO})_2$ • moles of gas produced • volume of gas produced 	<p>Correct answer with some working scores (3)</p> <p>Ignore SF except 1SF throughout</p> <p>Example of calculation:</p> <p>(1) $n = \frac{1.00}{284.6} = 0.0035137 / 3.5137 \times 10^{-3}$</p> <p>(1) $n = 0.0035137 \times 2 = 0.0070274 / 7.0274 \times 10^{-3}$ TE on M1</p> <p>(1) $v = 0.0070274 \times 24000 = 168.66 \text{ (cm}^3\text{)}$ Accept 0.16866 dm^3 TE on M2</p>	<p>(3)</p> <p>Expert</p>

Question Number	Answer	Additional Guidance	Mark
21(d)(i)	An answer that makes reference to the following point: <ul style="list-style-type: none"><li data-bbox="353 379 981 419">• (to provide a) constant concentration (of Cl⁻)	Allow KCl for Cl ⁻ throughout Allow to keep the solution / Cl ⁻ saturated Allow to replace Cl ⁻ Ignore just to provide Cl ⁻ Ignore stated concentrations Do not award salt bridge / to complete the circuit Do not award catalyst	(1) Expert

Question Number	Answer	Additional Guidance	Mark
21(d)(ii)	An answer that makes reference to the following point: <ul style="list-style-type: none">$(0.24 - 0.37 =) -0.13 \text{ (V)}$	Ignore working, even if incorrect	(1) Expert

Question Number	Answer	Additional Guidance	Mark
21(d)(iii)	An answer that makes reference to the following point: <ul style="list-style-type: none">$\text{Hg}_2\text{Cl}_2 + \text{Sn} \rightarrow 2\text{Hg} + \text{Sn}^{2+} + 2\text{Cl}^-$	Allow $\text{Hg}_2\text{Cl}_2 + \text{Sn} \rightarrow 2\text{Hg} + \text{SnCl}_2$ Allow multiples Allow \rightleftharpoons for \rightarrow Ignore state symbols even if incorrect Ignore half-equations even if incorrect Ignore use of cell diagrams Do not award uncanceled electrons Do not award $2\text{Hg}^+ (+ 2\text{Cl}^-)$ for Hg_2Cl_2 If answer to (d)(ii) is +0.61 (V) / +0.37 (V) / greater than +0.24 (V), equation must be reversed: $2\text{Hg} + \text{Sn}^{2+} + 2\text{Cl}^- \rightarrow \text{Hg}_2\text{Cl}_2 + \text{Sn}$ OR $2\text{Hg} + \text{SnCl}_2 \rightarrow \text{Hg}_2\text{Cl}_2 + \text{Sn}$	(1) Expert

Question Number	Answer	Additional Guidance	Mark
21(d)(iv)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> • hydrogen (gas)/H₂((g)) and 100 kPa • platinum (solid)/Pt((s)) and 298 K / 25°C • hydrochloric acid/HCl((aq)) and 1 mol dm⁻³ 	<p>Example of completed diagram:</p> <p>(1) Allow 101 kPa / 100 000 Pa / 101 000 Pa / 1 atm / 1 bar</p> <p>Accept platinum black for platinum Ignore porous</p> <p>(1) Ignore omission of state symbol 298 K / 25°C may be shown anywhere</p> <p>Allow H⁺ / H₃O⁺ for hydrochloric acid</p> <p>(1) Allow M for mol dm⁻³ Do not award 0.5 mol dm⁻³ H₂SO₄</p> <p>If no other mark awarded: hydrogen/H₂ and hydrochloric acid/HCl/H⁺/H₃O⁺ and platinum/Pt scores (1)</p>	<p>(3)</p> <p>Graduate</p>

Question Number	Answer	Additional Guidance	Mark
21(d)(v)	<p>An answer that makes reference to any one of the following points:</p> <ul style="list-style-type: none">• (calomel electrode) does not require a (separate) salt bridge <p>OR</p> <p>(calomel electrode) does not require a continuous supply of hydrogen / gas</p> <p>OR</p> <p>platinum/Pt (of hydrogen electrode is) easily poisoned</p> <p>OR</p> <p>difficult to ensure hydrogen electrode is at equilibrium</p>	<p>Ignore calomel electrode is quicker to use / easier to set up / done in the same container / more portable</p> <p>Accept does not require a hydrogen / gas generator</p> <p>Ignore just does not require hydrogen / gas</p> <p>Ignore any reference to pressure</p> <p>Ignore hydrogen is flammable / explosive / difficult to store</p> <p>Ignore (calomel electrode is) safer</p> <p>Ignore platinum is expensive</p> <p>Ignore (calomel electrode) is cheaper</p> <p>Allow (calomel electrode) reaches equilibrium sooner</p> <p>Allow (calomel electrode gives) more stable (reading)</p> <p>Ignore (calomel electrode is) more accurate</p> <p>Ignore calomel electrode potential is more positive</p>	<p>(1)</p> <p>Expert</p>

(Total for Question 21 = 20 marks)

Question Number	Answer	Additional Guidance	Mark
22	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> • moles of FeSO₄ • moles of excess MnO₄⁻ • initial moles of MnO₄⁻ <p>and</p> <p>moles of MnO₄⁻ reacted</p> <ul style="list-style-type: none"> • moles of C₂O₄²⁻ • mass of CaC₂O₄ • percentage by mass of CaC₂O₄ <p>and</p> <p>answer to 2SF or 3SF</p>	<p>Correct answer to 2SF or 3SF with some working scores (6)</p> <p>Ignore SF except 1SF</p> <p>Example of calculation:</p> <p>moles of FeSO₄ (1) $n = 0.0500 \times \frac{25.95}{1000} = 0.0012975 / 1.2975 \times 10^{-3}$</p> <p>moles of excess MnO₄⁻ (1) $n = 0.0012975 \div 5 = 0.0002595 / 2.595 \times 10^{-4}$ TE on moles of FeSO₄</p> <p>initial moles of MnO₄⁻ $n = 0.0100 \times \frac{50.0}{1000} = 0.0005 / 5 \times 10^{-4}$ (Allow 1 SF)</p> <p>and</p> <p>moles of MnO₄⁻ reacted (1) $n = 0.0005 - 0.0002595 = 0.0002405 / 2.405 \times 10^{-4}$ TE on moles of excess MnO₄⁻ provided answer is positive</p> <p>moles of C₂O₄²⁻ (1) $n = 0.0002405 \times 2.5 = 0.00060125 / 6.0125 \times 10^{-4}$ TE on moles of MnO₄⁻ reacted</p> <p>mass of CaC₂O₄ (1) $\text{mass} = 0.00060125 \times 128.1 = 0.077020$ (g) TE on moles of C₂O₄²⁻</p> <p>percentage by mass of CaC₂O₄ (1) $\% \text{ mass} = \frac{0.077020}{11.4} \times 100 = 0.67562$ (%) $= 0.68 / 0.676$ (%) TE on mass of CaC₂O₄ provided positive value to 2SF/3SF and < 100% Allow use of 128 for M_r of CaC₂O₄ giving 0.675 (%)</p>	<p>(6)</p> <p>Expert</p>

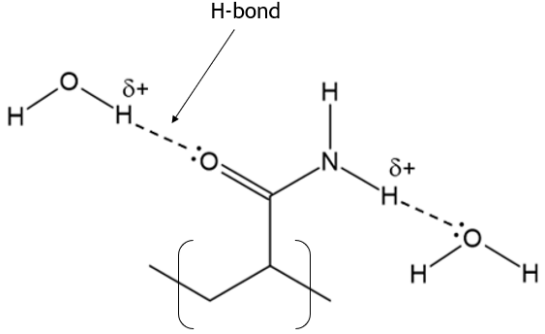

(Total for Question 22 = 6 marks)

Question Number	Answer	Additional Guidance	Mark																				
*23	<p>This question assesses a student's ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning.</p> <p>Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning.</p> <p>The following table shows how the marks should be awarded for indicative content.</p> <table border="1" data-bbox="309 608 1099 855"> <thead> <tr> <th>Number of indicative marking points seen in answer</th> <th>Number of marks awarded for indicative marking points</th> </tr> </thead> <tbody> <tr> <td>6</td> <td>4</td> </tr> <tr> <td>5-4</td> <td>3</td> </tr> <tr> <td>3-2</td> <td>2</td> </tr> <tr> <td>1</td> <td>1</td> </tr> <tr> <td>0</td> <td>0</td> </tr> </tbody> </table> <p>The following table shows how the marks should be awarded for structure and lines of reasoning.</p> <table border="1" data-bbox="309 959 1099 1406"> <thead> <tr> <th></th> <th>Number of marks awarded for structure and sustained lines of reasoning</th> </tr> </thead> <tbody> <tr> <td>Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.</td> <td>2</td> </tr> <tr> <td>Answer is partially structured with some linkages and lines of reasoning.</td> <td>1</td> </tr> <tr> <td>Answer has no linkages between points and is unstructured.</td> <td>0</td> </tr> </tbody> </table>	Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points	6	4	5-4	3	3-2	2	1	1	0	0		Number of marks awarded for structure and sustained lines of reasoning	Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.	2	Answer is partially structured with some linkages and lines of reasoning.	1	Answer has no linkages between points and is unstructured.	0	<p>The mark for indicative content should be added to the mark for lines of reasoning. For example, an answer with five indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning).</p> <p>If there are no linkages between points, the same five indicative marking points would yield an overall score of 3 marks (3 marks for indicative content and no marks for linkages).</p> <p>If there is any incorrect chemistry, deduct mark(s) from the reasoning. If no reasoning mark(s) awarded, do not deduct mark(s).</p> <p>Comment: Look for the indicative marking points first, then consider the mark for the structure of the answer and sustained line of reasoning.</p>	<p>(6)</p> <p>Expert</p>

	Number of marks awarded for structure and sustained lines of reasoning																						
Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.	2																						
Answer is partially structured with some linkages and lines of reasoning.	1																						
Answer has no linkages between points and is unstructured.	0																						

	<p>Indicative points:</p> <ul style="list-style-type: none">• IP1: thermochemical data calculation (enthalpy of hydrogenation of 1,3,5-cyclohexatriene / benzene is) expected to be $-360 \text{ (kJ mol}^{-1}\text{)}$• IP2: thermochemical data comparison (enthalpy of hydrogenation is) less exothermic / less negative than expected (for 1,3,5-cyclohexatriene) <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"><p>less exothermic / more stable by $152 \text{ (kJ mol}^{-1}\text{)}$ scores IP1 and IP2</p></div> <ul style="list-style-type: none">• IP3: X-ray diffraction data (carbon-carbon) bond lengths in benzene are equal <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"><p>Ignore any reference to bond strength / bond angle in IP3 and IP4</p></div> <ul style="list-style-type: none">• IP4: X-ray diffraction data (carbon-carbon) bond length in benzene is longer than (localised) C=C (in cyclohexene)• IP5: Bromination data (product for benzene is formed by electrophilic) substitution• IP6: Bromination data (benzene π-bonds less reactive than localised π-bonds and) requires (FeBr₃) catalyst (and heat)	<p>Allow (enthalpy of hydrogenation is) expected to be three times the value for cyclohexene Allow (enthalpy of hydrogenation is) different by $152 \text{ (kJ mol}^{-1}\text{)}$</p> <p>Accept reverse argument Ignore higher/lower for less exothermic Ignore benzene more exothermic than cyclohexene Ignore just benzene more stable than expected Do not award enthalpy required/needed</p> <p>Allow (carbon-carbon) bond lengths are not different Allow cyclohexene (carbon-carbon) bond lengths are different</p> <p>Accept (carbon-carbon) bond length is in between C=C and C-C (in cyclohexene) Allow (carbon-carbon) bond length is shorter than C-C (in cyclohexene)</p> <p>Allow (benzene) does not react by addition Allow cyclohexene/localised π-bonds react by addition Ignore any equations / mechanisms Do not award nucleophilic (substitution / addition)</p> <p>Accept cyclohexene does not require a catalyst Allow halogen carrier for catalyst Ignore just benzene does not decolourise bromine water Do not award Fe catalyst</p>
