## **Mark Scheme (Results)**

Summer 2018

Pearson Edexcel International A Level  
In Mathematics  
Statistics S3 (WST03/01)

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

**Mark Scheme**

**General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

# EDEXCEL IAL MATHEMATICS

## General Instructions for Marking

1. The total number of marks for the paper is 75.
2. The Edexcel Mathematics mark schemes use the following types of marks:
  - **M** marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
  - **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
  - **B** marks are unconditional accuracy marks (independent of M marks)
  - Marks should not be subdivided.
3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod – benefit of doubt
  - ft – follow through
  - the symbol  $\checkmark$  will be used for correct ft
  - cao – correct answer only
  - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
  - isw – ignore subsequent working
  - awrt – answers which round to
  - SC: special case
  - oe – or equivalent (and appropriate)
  - dep – dependent
  - indep – independent
  - dp decimal places
  - sf significant figures
  - \* The answer is printed on the paper
  - $\square$  The second mark is dependent on gaining the first mark
4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
  5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
  6. If a candidate makes more than one attempt at any question:
    - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
    - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
  7. Ignore wrong working or incorrect statements following a correct answer.

$\hat{\Delta}d^2 = 25 + 49 + 25 + 4 + 0 + 4 + 0 + 25 + 64 = 196$		M1 A1																																																		
$r_s = 1 - \frac{6(196)}{9(9^2 - 1)}; = -0.63333333... \text{ or } -\frac{19}{30}$		dM1; A1																																																		
		<b>[5]</b>																																																		
(b)	$H_0 : \rho_s = 0, H_1 : \rho_s < 0$	B1																																																		
	Critical Value = - 0.6000 or -0.6 or CR: $r_s \leq -0.6000$	B1																																																		
	Since $r_s = -0.6333...$ lies in the CR (or $-0.6333 < -0.6$ ), reject $H_0$	M1																																																		
	Either conclude that <ul style="list-style-type: none"> <li>• <u>Russell's claim is true</u></li> <li>• Footballers with <u>lower BMI are slower</u></li> </ul>	Conclusion in context A1																																																		
		<b>[4]</b>																																																		
(c)	<b>Both</b> Critical Value $r = -0.5822$ /CR: $r \leq -0.5822$ <b>and</b> does not lie in the CR /Result is <u>not significant</u> /Do not reject $H_0$ (or accept $H_0$ )	M1																																																		
	Conclude that there is <u>no negative correlation</u> oe Context not required here.	A1																																																		
			<b>[2]</b>																																																	
(d)	The relationship (between BMI and time taken to complete the obstacle course) is non-linear oe	B1																																																		
			<b>[1]</b>																																																	
<b>Question 1 Notes</b>																																																				
1. (a)	<b>1<sup>st</sup> M1</b>	Attempt to rank data for x and y at least 5 correct for each (allow reverse rankings)																																																		
	<b>2<sup>nd</sup> M1</b>	For finding the difference between each of the ranks and evaluating $\hat{\Delta}d^2$																																																		
	<b>1<sup>st</sup> A1</b>	$\hat{\Delta}d^2 = 196$ or from reverse rankings $\hat{\Delta}d^2 = 9 + 1 + 1 + 16 + 0 + 0 + 16 + 1 + 0 = 44$																																																		
	<b>3<sup>rd</sup> dM1</b>	<i>is dependent on 1<sup>st</sup> M1</i> for use of $1 - \frac{6("196")}{9(9^2 - 1)}$ with their $\hat{\Delta}d^2$ .																																																		
	<b>2<sup>nd</sup> A1</b>	awrt - 0.633 or $-\frac{19}{30}$ or from reverse rankings $\frac{19}{30}$																																																		
(b)	<b>1<sup>st</sup> B1</b>	Both hypotheses stated in terms of $r$ or $\rho_s$ .																																																		
	<b>Note</b>	One tail $H_1$ must be compatible with their ranking.																																																		
	<b>2<sup>nd</sup> B1</b>	Critical value of $\pm 0.6$																																																		
	<b>M1</b>	For a correct statement relating their $r_s$ ( $ r_s  < 1$ ) with their c.v. where $ \text{their c.v.}  < 1$																																																		
	<b>A1</b>	For a contextualised comment which is rejecting $H_0$ , which must mention either " <u>negative correlation</u> ", " <u>BMI</u> " and " <u>time</u> " or " <u>lower BMI are slower</u> " o.e.																																																		
	<b>Note</b>	Follow through their $r_s$ with their c.v. (provided $ \text{their c.v.}  < 1$ )																																																		
(c)	<b>M1</b>	Allow $\pm 0.5822$ Ignore hypotheses in this part for the M1 Use of $-0.633$ here is M0																																																		

Question Number	Scheme		Marks																																																						
2. (a)	$\hat{p} = \frac{7(3) + 8(5) + 9(18) + 10(28) + 11(17) + 12(4)}{12(3+5 + 18 + 28 + 17 + 4) \text{ or } 12(75)} \left\{ = \frac{738}{900} \right\} = 0.82(*)$		Answer is given. See notes. M1 A1cso [2]																																																						
(b)	$r = 75 \cdot {}^{12}C_9(0.82)^9(0.18)^3 \left\{ = 16.1296941\dots \right\}$ (formula) $s = 75 - (2.80 + 7.97 + \text{their } r + 22.04 + 18.26 + 6.93)$ $r = 16.1296941\dots ; s = 0.87\dots$		M1 A1; A1 [3]

	$X^2 = \text{awrt } 4.3$		A1																																																						
	$v = 5 - 1 - 1 = 3$		B1 ft																																																						
	$\chi_3^2(0.10) = 6.251 \Rightarrow \text{CR: } X^2 \geq 6.251$		B1 ft																																																						
	[does not lie in the CR/not significant/Do not reject $H_0$ /Accept $H_0$ ]																																																								
	Binomial distribution is a suitable model.	A correct conclusion (context not required here) which is based on <i>their</i> $X^2$ -value and <i>their</i> $\chi^2$ -critical value.	A1 [7]																																																						
	<b>Question 2 Notes</b>		12																																																						
2. (a)	<b>M1</b>	At least 2 non zero products on the numerator and correct division for their method																																																							
	<b>A1 cso</b>	Correct answer $p = 0.82$ with no incorrect working seen																																																							
(b)	<b>M1</b>	For any correct method (or a correct expression) for finding either $r$ or $s$ .																																																							
	<b>A1; A1</b>	$r = \text{awrt } 16.13 ; s = \text{awrt } 0.87$																																																							
(c)	<b>1<sup>st</sup> B1</b>	Must have both hypotheses and mention Binomial at least once. Inclusion of 0.82 for $p$ in hypotheses is B0 but condone in conclusion.																																																							
	<b>1<sup>st</sup> M1</b>	For an attempt to pool 8, 7 and $\leq 6$ germinating seeds ONLY.																																																							
	<b>2<sup>nd</sup> M1</b>	For an attempt at the test statistic, at least 2 correct expressions/values (to awrt 2 d.p. or truncated 2 d.p.)																																																							
	<b>1<sup>st</sup> A1</b>	awrt 4.3																																																							
	<b>2<sup>nd</sup> B1ft</b>	For their evaluated $n - 1 - 1$ . i.e. realising that they must subtract 2 from their $n$ .																																																							
	<b>3<sup>rd</sup> B1ft</b>	For a correct ft for their $\chi_k^2(0.10)$ , from their degrees of freedom																																																							
	<b>Note</b>	For 0.10 significance: $\chi_6^2 = 10.645$ $\chi_5^2 = 9.236$ $\chi_4^2 = 7.779$ $\chi_2^2 = 4.605$																																																							
	<b>Final A1</b>	<b>Dependent on the 2<sup>nd</sup> Method mark only.</b> A correct conclusion (context not required) which is accepting $H_0$																																																							
	<b>Note</b>	No follow through on their hypotheses if they are stated the wrong way round.																																																							
	<b>Note</b>	Contradictory statements score A0. E.g. "significant, do not reject $H_0$ ".																																																							
	<b>Note</b>	Condone mentioning of B(12, 0.82) in conclusion.																																																							

Question Number	Scheme		Marks
3. (a)		$\left\{ \hat{m}_x = \bar{x} = \frac{92.0}{20} \Rightarrow \bar{x} = 4.6 \text{ (cm)} \right.$	4.6 B1
		$\left\{ \hat{S}_x^2 = \right\} s_x^2 = \frac{433.4974 - 20(4.6)^2}{20 - 1} = 0.541968... \text{ (cm)}^2$	Applies $\frac{\hat{a}x^2 - 20(\text{their } \bar{x})^2}{20 - 1}$ awrt <b>0.542</b> M1 A1
			[3]
(b)		Combined Sample: Mean = $\frac{92.0 + 142.5}{20 + 30} = 4.69$	4.69 Can be implied. B1
		$s^2 = \frac{433.4974 + 689.5078 - 50(4.69)^2}{20 + 30 - 1}; = 0.4734734694$	awrt 0.473 or 0.4735 (can be implied) M1; A1
		$\frac{s}{\sqrt{n}} = \frac{\sqrt{0.4734734694...}}{\sqrt{50}}; = 0.09731119868...$	For use of $s/\sqrt{50}$ awrt <b>0.0973</b> M1; A1
			[5]
(c)		$H_0 : m = 4.5 \quad H_1 : m > 4.5$	Correct hypotheses B1
		$z = \frac{"4.69" - 4.5}{\frac{0.71}{\sqrt{50}}}; = 1.892257583...$	$\pm \frac{\text{their } 4.69 - 4.5}{\frac{0.71}{\sqrt{50}}}$ or equivalent. awrt <b>1.89</b> M1; A1
		One tailed c.v. $Z = 1.6449$ or CR: $Z \geq 1.6449$ or p-value = awrt 0.029 or awrt $0.029 < 0.05$	Critical value of 1.6449 or a correct probability comparison. B1
		[in the CR/significant/Reject $H_0/0.029 < 0.05$ ]	
		Conclude either • there is evidence to <u>support</u> the <u>farmer's claim</u> • that the <u>mean width</u> of duck <u>eggs</u> is <u>greater than 4.5</u> cm.	A correct conclusion which is rejecting $H_0$ in context and is based on <i>their</i> z-value and <i>their</i> critical value, where $ c.v.  > 1$ . A1
		[5]	
			13
<b>Question 3 Notes</b>			
3. (a)	<b>M1</b>	Also allow M1 for applying $\frac{20}{(20 - 1)} \left( \frac{\sum x^2}{20} - (\text{their } \bar{x})^2 \right)$	
(b)	<b>1<sup>st</sup> M1</b>	Also allow 1 <sup>st</sup> M1 for applying $\frac{50}{(50 - 1)} \left( \frac{\sum x^2 + \sum y^2}{20 + 30} - (\text{their } \bar{x}_{\text{comb}})^2 \right)$	
	<b>Note</b>	Award B1M1A1M1A1 for awrt 0.0973 which follows from no working.	
(c)	<b>1<sup>st</sup> M1</b>	Condone use of 4.6 for this M1 mark.	
	<b>2<sup>nd</sup> A1</b>	Conclusion must refer to either "farmer's claim" or "mean width" and "eggs".	

Question Number	Scheme	Marks																													
4. (a)	$H_0$ : <b>Mean</b> number of reported first-aid incidents per 1000 employees is the <u>same</u> at each warehouse. $H_1$ : <b>Mean</b> number of reported first-aid incidents per 1000 employees is <u>not the same</u> .	B1

Can score B1M1A0M1A0B1A0 (4 out of 7)

(b)

Use of 3800 in part (b) is B0B0

Question Number	Scheme		Marks
<b>5.</b>	95% CI for $m$ is (30.612, 31.788); $c\%$ CI for $m$ is (30.66, 31.74)		
(a)	$\frac{2(1.96)S}{\sqrt{25}} = 31.788 - 30.612 \{= 1.176\}$	$\frac{2"z"S}{\sqrt{25}} = 31.788 - 30.612$	M1 oe
		1.96	B1
	$\left\{ \Rightarrow S = \frac{(1.176)(5)}{2(1.96)} \Rightarrow \right\} S = 1.5$	$S = 1.5$	A1
			[3]
(b)	$\frac{2z(1.5)}{\sqrt{25}} = 31.74 - 30.66 \{= 1.08\}$	$\frac{2z("1.5")}{\sqrt{25}} = 31.74 - 30.66$	M1 oe
	$z = \frac{(1.08)(5)}{2("1.5")} \rightarrow z = 1.8$	$z = 1.8$	A1ft
	$\left[ \frac{c}{100} = \right] 2(0.9641) - 1$	$2F(\text{their "1.8"}) - 1$ oe	M1
	$\text{D } c = 92.8$ (3sf)	awrt <b>92.8</b>	A1
			[4]
			7
<b>Question 5 Notes</b>			
<b>5. (a)</b>	<b>M1</b>	Also allow M1 (oe) for $31.2 + \frac{\text{"their } z"S}{\sqrt{25}} = 31.778$ , where $31.2 = \frac{30.612 + 31.778}{2}$	
(b)	<b>1<sup>st</sup> M1</b>	Also allow M1 (oe) for $31.2 + \frac{z(\text{their "1.5"})}{\sqrt{25}} = 31.74$ , where $31.2 = \frac{30.66 + 31.74}{2}$	
	<b>1<sup>st</sup> A1ft</b>	For a correct (ft) expression using their value of $\sigma$	
	<b>2<sup>nd</sup> M1</b>	awrt 0.928 implies this mark	
	<b>Note</b>	Use of 1.6449 gives $\sigma = 1.787\dots$ and leads to $z = 1.51\dots$ and $c = 86.9$ (3sf) (M1A1ftM1A0)

<b>Question 6 Notes</b>		
(b)	1 <sup>st</sup> M1 The inequalities may be seen separately. For only considering 1-tail of confidence interval (usually the upper tail) allow access to 1 <sup>st</sup> M1 only (so M1B1M0A0 is possible). A second division of their SE by 60 is 1 <sup>st</sup> M0	

Question Number	Scheme		Marks	
7. (i) (a)	$A \sim N(21, 2^2), B \sim N(32, 7^2)$ and $C \sim N(45, 9^2)$ $A, B, C$ are independent.			
	$T = A + B + C$			
	$E(T) = 21 + 32 + 45$ or $\text{Var}(T) = 2^2 + 7^2 + 9^2$	A fully correct method of finding $E(T)$ or $\text{Var}(T)$	M1	
	$E(T) = 98$ and $\text{Var}(T) = 134$	Both $E(T) = 98$ and $\text{Var}(T) = 134$	A1	
	{So $T \sim N(98, 134)$ }			
	$\{P(T > 90) = \}$ $P\left(Z > \frac{90 - 98}{\sqrt{134}}\right)$	Standardising ( $\pm$ ) with their mean and their standard deviation	M1	
	$= P(Z > -0.69109\dots)$			
	$= 0.7549$ (or $0.75525\dots$ )	awrt <b>0.755</b>	A1	
			<b>[4]</b>	
	(b)	$\{P(A > B) = P(A - B > 0)\}$		
		$E(A - B) = 21 - 32$ or $\text{Var}(T) = 2^2 + 7^2$	A fully correct method of finding $E(A - B)$ or $\text{Var}(A - B)$	M1
		$E(A - B) = -11$ and $\text{Var}(A - B) = 53$	Both $E(A - B) = -11$ and $\text{Var}(A - B) = 53$	A1
		{So $A - B \sim N(-11, 53)$ }		
		$\{P(A - B > 0)\} \Rightarrow P\left(Z > \frac{0 - (-11)}{\sqrt{53}}\right)$	Standardising ( $\pm$ ) with their mean and their standard deviation	M1
$= P(Z > 1.510966\dots)$				
	$= 0.06539855\frac{1}{4}$ (or $0.0655$ )	<b>0.0655</b> or awrt <b>0.0654</b>	A1	
		<b>[4]</b>		
(ii)	$\{P(X_1 > \bar{X} + kS) = 0.1 \supset P(X_1 - \bar{X} > kS) = 0.1\}$			
	$X_1 - \bar{X}; \left\{ = X_1 - \frac{(X_1 + X_2 + X_3 + X_4)}{4} = \frac{3X_1 - (X_2 + X_3 + X_4)}{4} \right\}$	For attempting to find the distribution of $X_1 - \bar{X}$	M1	
	$E(X_1 - \bar{X}) = 0$	Correct mean	A1	
	$\text{Var}(X_1 - \bar{X}) = \frac{9\sigma^2 + 3\sigma^2}{4^2}; \Rightarrow X_1 - \bar{X} \sim N(0, 0.75\sigma^2)$	Correct expression for $\text{Var}(X_1 - \bar{X})$	dM1	
		$X_1 - \bar{X} \sim N(0, 0.75S^2)$	A1	
	$\left\{ P(X_1 - \bar{X} > kS) = 0.1 \Rightarrow P\left(Z > \frac{kS - 0}{\sqrt{0.75S^2}}\right) = 0.1 \right\}$			
	So, $\frac{k}{\sqrt{0.75}} = 1.2816$	Standardising using their $\sqrt{\text{Var}(X_1 - \bar{X})}$ . Note that $S$ must cancel and equating to a z-value, $ z  > 1$ .	M1	
		1.2816	B1	
$\{k = \sqrt{0.75} (1.2816)\} \supset k = 1.109898157\dots$	awrt <b>1.11</b>	A1		
		<b>[7]</b>		
			<b>15</b>	
<b>Question 7 Notes</b>				
7. (i) (a)	<b>1<sup>st</sup> M1</b>	Can be implied by either a correct $E(T)$ or $\text{Var}(T)$		
(i) (b)		Allow equivalent method using $B - A < 0$		
(ii)	<b>Final A1</b>	Dependent upon all previous M marks in (ii)
