Mathematics
International Advanced Level
Core Mathematics C34

You must have:

Mathematical Formulae and Statistical Tables (Blue), calculator

Total Marks

--

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 15 questions in this question paper. The total mark for this paper is 125.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

1/1/1/

Pearson

1.
$$f(x) = 2x^4 + x^2 - 3x + 8$$

The curve with equation $y = f(x)$ has a single turning point when $x = \alpha$

(a) Show that α is a solution of the equation

$$x = \sqrt[3]{\frac{3 - 2x}{8}} \tag{3}$$

The iterative formula

$$x_{n+1} = \sqrt[3]{\frac{3 - 2x_n}{8}} \quad x_1 = 0.6$$

is used to find an approximate value for α .

(b) Calculate the value of x_2 and the value of x_3 giving your answers to 4 decimal places. (2)

(c) By choosing a suitable interval, show that $\alpha = 0.607$ to 3 decimal places. (2)

2. (a) Find the first 4 terms, in ascending powers of x , of the binomial expansion of

$$\left(\frac{1}{4} - 3x\right)^{\frac{1}{2}}$$

giving each coefficient in its simplest form.

(5)

By substituting $x = \frac{1}{100}$ into the answer for (a),

(b) find an approximation for $\sqrt{22}$, giving your answer to 4 decimal places.

3.

Figure 1

Figure 1 shows a sketch of the curve with equation $y = \frac{10}{1 + \sqrt{x}}$, $x \geq 0$

The finite region R , shown shaded in Figure 1, is bounded by the curve, the line with equation $x = 4$, the x -axis and the line with equation $x = 6$

(a) Use the trapezium rule, with four strips, to find an estimate for the area of R . Show your working and give your answer to 2 decimal places. (4)

(b) Using your answer to part (a) and making your method clear, estimate the value of

(i) $\int_2^3 \frac{60}{1 + \sqrt{2x}} dx$

(ii) $\int_4^6 \frac{13 + 3\sqrt{x}}{1 + \sqrt{x}} dx$

(Solutions relying entirely on calculator technology are not acceptable.) (4)

5.

Figure 2

The continuous function f is defined by

$$f(x) = \begin{cases} 9 + 3x & x \leq 6 \\ B - Ax^2 & x > 6 \end{cases} \quad \text{where } A \text{ and } B \text{ are positive constants}$$

A sketch of $y = f(x)$ is shown in Figure 2.

(a) Find the range of f .

(1)

Given that one of the solutions of the equation $f(x) = 0$ is 12

(b) (i) find the other solution,

(ii) find the value of A and the value of B .

(4)

(c) Find the value of $ff(0)$.

7. Given $y = 3x(2x - 5)^4$

(a) show that

$$\frac{dy}{dx} = 15(2x - 5)^3(Ax + B)$$

where A and B are integers to be found.

(4)

(b) Hence find the range of values of x for which y is decreasing.

8.

Figure 3

Figure 3 shows a sketch of the curve with parametric equations

$$x = 4 \sin t, \quad y = 3 \sin 2t, \quad 0 \leq t \leq \frac{\pi}{2}$$

The region R , shown shaded in Figure 3, is bounded by the curve, the x -axis and the line with equation $x = 2$

Find the exact area of R .

(Solutions relying entirely on calculator technology are not acceptable.)

9. With respect to a fixed origin O , the lines l_1 and l_2 are given by the equations

$$l_1: \mathbf{r} = \begin{pmatrix} 2 \\ 1 \\ 3 \end{pmatrix} + \lambda \begin{pmatrix} -2 \\ 1 \\ 4 \end{pmatrix}$$

$$l_2: \mathbf{r} = \begin{pmatrix} 10 \\ c \\ 3 \end{pmatrix} + \mu \begin{pmatrix} a \\ b \\ -2 \end{pmatrix}$$

where a , b and c are constants and λ and μ are scalar parameters.

Given that

- l_1 and l_2 meet when $\lambda = -2$
- l_1 and l_2 are perpendicular

find the value of a , the value of b and the value of c .

Q10

(Total 11 marks)

11. (a) Prove

$$\frac{\cos 3\theta}{2 \sin \theta} + \frac{\sin 3\theta}{2 \cos \theta} \equiv \cot 2\theta \quad \theta \neq \frac{n\pi}{2} \quad n \in \mathbb{Z}$$

(4)

(b) Hence solve, for $0 < x < \frac{\pi}{2}$

$$\frac{\cos 3x}{2 \sin x} + \frac{\sin 3x}{2 \cos x} = 5 \cos 2x$$

giving your answers to 3 decimal places where appropriate.

(Solutions based entirely on graphical or numerical methods are not acceptable.)

15.

Figure 4

A jet is flying over the sea.

The height above sea level, H metres, of the jet is modelled by the equation

$$H = \frac{8000}{56 + 9 \cos t^\circ + 40 \sin t^\circ} \quad 0 \leq t \leq 200$$

where t is the time in seconds, measured from when the jet passed over a boat.

Figure 4 is a sketch showing the graph of H against t .

Use the model to answer parts (a), (c) and (d).

(a) Find the height above sea level of the jet as it passed over the boat. (1)

(b) Write $9 \cos t^\circ + 40 \sin t^\circ$ in the form $R \cos(t - \alpha)^\circ$ where $R > 0$ and $0 < \alpha < 90$
 Give the exact value of R and the value of α to one decimal place. (3)

(c) Find (i) the minimum height of the jet above sea level,
 (ii) the value of t at which this minimum height occurs. (3)

(d) Find the value of t when the jet is 150m above sea level. (4)
