UNIT 2: Waves and Electricity

You must have:

Scientific calculator, ruler, protractor

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- **Show all your working out** in calculations and **include units** where appropriate.

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

SECTION A

Answer ALL questions.

<https://britishstudentresources.com/>

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 Waves may spread out as they pass an object.

Which of the following is the name of this process?

- A diffraction
- B interference
- C reflection
- D refraction

(Total for Question 1 = 1 mark)

2 The time period of a wave decreases.

Which of the following properties of the wave increases?

- A amplitude
- B frequency
- C speed
- D wavelength

(Total for Question 2 = 1 mark)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

3 Monochromatic light is incident on a rectangular glass block. Some of the light is reflected and some of the light is refracted, as shown.

Which of the following properties does **not** decrease when the light is refracted?

- A frequency
- B intensity
- C speed
- D wavelength

(Total for Question 3 = 1 mark)

4 The current in a length of uniform wire is constant.

Which of the following graphs shows how the potential difference (p.d.) across the wire varies with the length of the wire?

A

B

C

D

(Total for Question 4 = 1 mark)

5 An electron has a de Broglie wavelength of 1.55×10^{-9} m.

Which of the following gives the speed, in ms^{-1} , of this electron?

- A $\frac{9.11 \times 10^{-31}}{6.63 \times 10^{-34} \times 1.55 \times 10^{-9}}$
- B $\frac{1.55 \times 10^{-9} \times 9.11 \times 10^{-31}}{6.63 \times 10^{-34}}$
- C $\frac{6.63 \times 10^{-34} \times 1.55 \times 10^{-9}}{9.11 \times 10^{-31}}$
- D $\frac{6.63 \times 10^{-34}}{1.55 \times 10^{-9} \times 9.11 \times 10^{-31}}$

(Total for Question 5 = 1 mark)

6 Two waves, of wavelength 12 cm, leave a source in phase.

The waves travel along different paths to a point X. The path difference at X is 18 cm.

Which of the following is the phase difference between the two waves at X?

- A 0 radians
- B $\frac{\pi}{2}$ radians
- C π radians
- D $\frac{3\pi}{2}$ radians

(Total for Question 6 = 1 mark)

7 Two waves are coherent.

Which of the following **must** be true for the two waves?

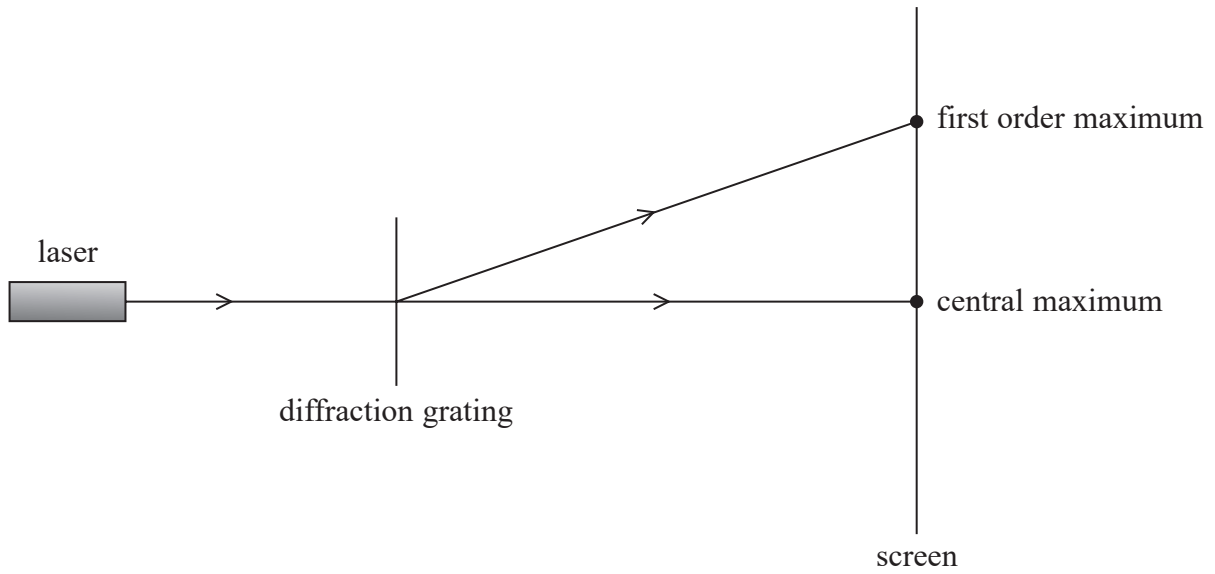

- A They are in antiphase with each other.
- B They are in phase with each other.
- C They have the same amplitude.
- D They have the same frequency.

(Total for Question 7 = 1 mark)

8 Light from a laser is incident on a diffraction grating, causing a series of maxima to be seen on a screen.

The positions of the central maximum and first order maximum are shown.

Which of the following changes would decrease the distance between the central maximum and the first order maximum?

- A Decreasing the distance from the laser to the diffraction grating
- B Increasing the distance from the diffraction grating to the screen
- C Using a diffraction grating with more lines per millimetre
- D Using light with a smaller wavelength

(Total for Question 8 = 1 mark)

9 Earth and Jupiter orbit the Sun, as shown.

The distance from Earth to the Sun is 1.49×10^{11} m.
The distance from Jupiter to the Sun is 7.78×10^{11} m.

The intensity of sunlight at Jupiter is I_J .

Which of the following can be used to calculate the intensity of the sunlight at Earth?

- A $I_J \times \frac{(7.78 \times 10^{11})^2}{(1.49 \times 10^{11})^2}$
- B $I_J \times 4\pi \times \frac{(7.78 \times 10^{11})^2}{(1.49 \times 10^{11})^2}$
- C $I_J \times \frac{7.78 \times 10^{11}}{1.49 \times 10^{11}}$
- D $I_J \times 4\pi \times \frac{7.78 \times 10^{11}}{1.49 \times 10^{11}}$

(Total for Question 9 = 1 mark)

10 As the temperature of the filament in a bulb decreases, the resistance of the filament changes.

Which of the following is the reason for this change in resistance of the filament?

- A Lattice vibrations decrease
- B Lattice vibrations increase
- C Number of conduction electrons decreases
- D Number of conduction electrons increases

(Total for Question 10 = 1 mark)

TOTAL FOR SECTION A = 10 MARKS

SECTION B

Answer ALL questions in the spaces provided.

<https://britishstudentroom.com/>

11 Part of an electrical circuit is shown.

In 60 seconds, 4.80×10^{20} electrons pass point Z.

(a) Show that the current at Z is about 1.3 A.

(3)

.....

.....

.....

.....

.....

.....

.....

(b) In 60 seconds, the resistor transfers 24 J of energy.

Calculate the potential difference across the resistor.

(2)

.....

.....

.....

.....

Potential difference =

(Total for Question 11 = 5 marks)

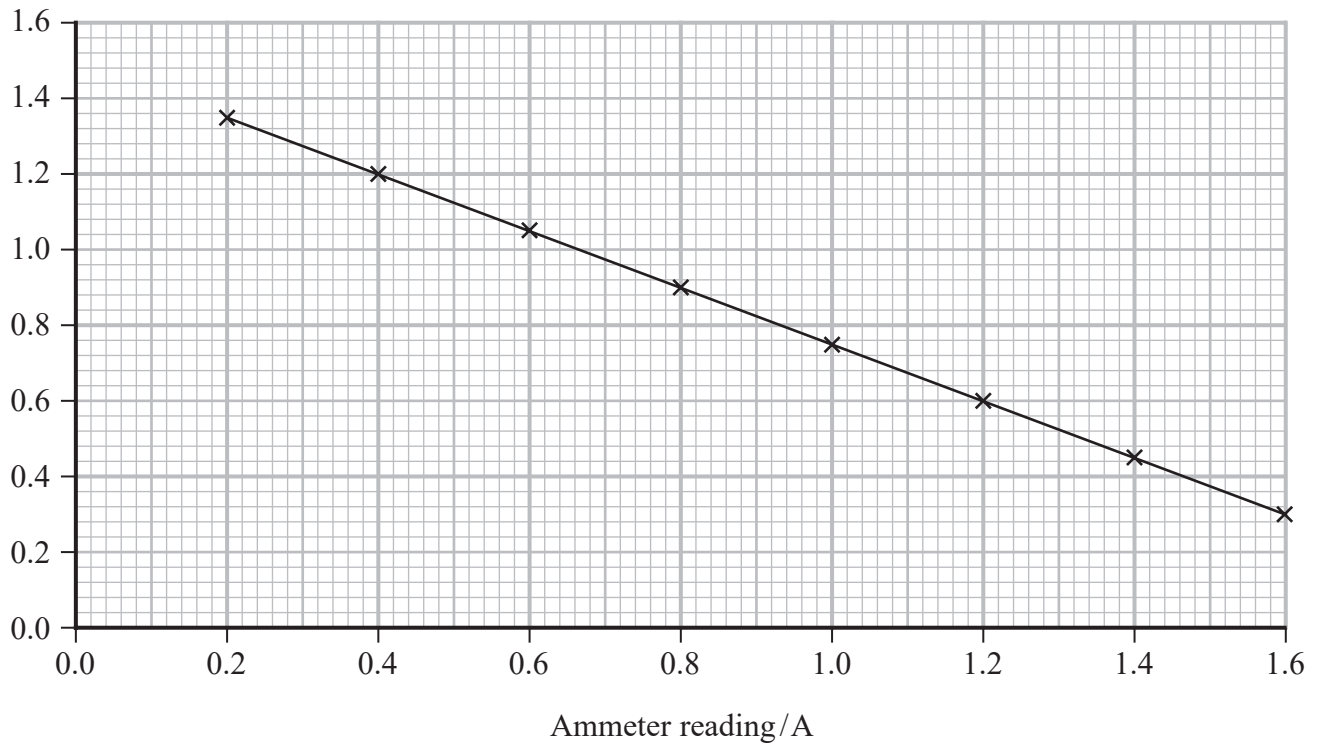

12 A student investigated the internal resistance of a cell, using the circuit shown.

The student used the variable resistor to vary the reading on the ammeter. He recorded corresponding readings from the voltmeter.

The student plotted the results on a graph, as shown.

Voltmeter reading / V

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

15 Ultrasound can be used to check for cracks in metal beams.

A transducer emits a pulse of ultrasound into a metal beam. The same transducer detects the returning pulses.

Part of a metal beam is shown. The beam contains three cracks, A, B and C.

The transducer detects a returning pulse from each crack.

(a) Explain why there is a returning pulse from crack B.

(3)

(b) In a car, two headlights are connected in parallel with a 12.0V battery. The battery has negligible internal resistance.

(i) Explain the advantages of connecting the headlights in parallel with the battery rather than in series.

(3)

.....

.....

.....

.....

.....

.....

(ii) A student writes the following statement.

When connected to the 12.0V battery, the combined resistance of two headlights in parallel is one quarter of the combined resistance of two headlights in series.

Deduce whether the student is correct.

Your answer should include calculations using data from the graph.

(3)

.....

.....

.....

.....

.....

.....

(c) The headlights are connected in the circuit using copper wire. The current in the wire is 4.60 A.

Calculate the drift velocity of electrons in the copper wire.

number of charge carriers per m^3 of copper = $8.49 \times 10^{28} \text{ m}^{-3}$

resistivity of copper = $1.72 \times 10^{-8} \Omega \text{ m}$

resistance per unit length of the copper wire = $1.75 \times 10^{-2} \Omega \text{ m}^{-1}$

(3)

17 The diagram shows the energy levels for an atom of hydrogen.

An electron is in the -13.6 eV (ground state) level of this atom.

(a) A photon interacts with this electron.

Explain why this interaction causes the emission of another photon.

(2)

.....

.....

.....

.....

.....

(b) A photon has a wavelength of 218 nm.

(i) Determine the energy, in eV, of this photon.

(4)

.....

.....

.....

.....

.....

.....

Photon energy = eV

(ii) Explain whether the atom of hydrogen could emit a photon with this energy.

18 The photograph shows a musical instrument called a violin.

<https://britishstudentroom.com/>

The violin has four strings. Each string is held in a fixed position by a peg and at the bridge.

When a string is plucked, a stationary wave forms on the string.

(a) Explain how a stationary wave forms on the string.

(3)

.....

.....

.....

.....

.....

.....

- (b) The simplest stationary wave that can be formed on the string has a node (N) at each end and an antinode (A) at the centre, as shown.

The frequency of this wave is called the fundamental frequency.

The strings on a violin have different fundamental frequencies, as shown in the table.

String	Fundamental frequency / Hz
1	196
2	294
3	440
4	659

The tension in one of the strings is 71.5 N. The length of the string is 32 cm and the mass per unit length of the string is $2.03 \times 10^{-3} \text{ kg m}^{-1}$.

Deduce whether this is string 1, 2, 3 or 4.
